Preface	xiii
Common Symbols	xvii
I Introduction to Dynamics	1
1 Introduction	3
1.1 Stochastic Dynamics	4
1.1.1 Markov Dynamics	4
1.1.2 Interacting Particle Systems	8
1.1.3 A Model of Segregation	11
1.1.4 A Markov Perspective	14
1.2 Where to From Here?	17
1.2.1 General State Space	17
1.2.2 Forward Looking Agents	21
1.3 Commentary	22
2 Programming	25
2.1 Algorithms	25
2.1.1 Iteration and Flow Control	26
2.1.2 Application: Bisection	29
2.2 Program Design	30
2.2.1 User-Defined Functions	30
2.2.2 Object Oriented Programming	34
2.2.3 High Performance Computing	37
3 Analysis in Metric Space	39
3.1 A First Look at Metric Space	39

3.1.1	Distances and Norms	40
3.1.2	Sequences	42
3.1.3	Open Sets, Closed Sets	45
3.2	Further Properties	48
3.2.1	Completeness	48
3.2.2	Compactness	51
3.2.3	Optimization, Equivalence	52
3.2.4	Fixed Points	55
3.3	Commentary	58
4	Introduction to Dynamics	61
4.1	Deterministic Dynamical Systems	61
4.1.1	The Basic Model	61
4.1.2	Global Stability	65
4.1.3	Chaotic Dynamic Systems	68
4.1.4	Equivalent Dynamics and Linearization	70
4.2	Finite State Markov Chains	73
4.2.1	Definition	73
4.2.2	From MCs to SRSs	76
4.2.3	Marginal Distributions	79
4.2.4	Other Identities	81
4.2.5	Constructing Joint Distributions	84
4.3	Stability of Finite State MCs	86
4.3.1	Stationary Distributions	87
4.3.2	The Dobrushin Coefficient	91
4.3.3	Stability	93
4.3.4	The Law of Large Numbers	97
4.4	Commentary	99
5	Further Topics for Finite MCs	101
5.1	Optimization	101
5.1.1	Outline of the Problem	101
5.1.2	Value Iteration	104
5.1.3	Policy Iteration	108
5.2	MCs and SRSs	109
5.2.1	Application: Equilibrium Selection	109
5.2.2	The Coupling Method	112
5.3	Commentary	115

6	Infinite State Space	117
6.1	First Steps	117
6.1.1	Basic Models and Simulation	117
6.1.2	Distribution Dynamics	122
6.1.3	Density Dynamics	124
6.1.4	Stationary Densities: First Pass	130
6.2	Optimal Savings, Infinite State	133
6.2.1	Optimization	133
6.2.2	Fitted Value Iteration	135
6.2.3	Policy Iteration	140
6.3	Stochastic Speculative Price	142
6.3.1	The Model	142
6.3.2	Numerical Solution	147
6.3.3	Equilibria and Optima	149
6.4	Commentary	151
II	Advanced Techniques	155
7	Integration	157
7.1	Measure Theory	157
7.1.1	Lebesgue Measure	157
7.1.2	Measurable Spaces	161
7.1.3	General Measures and Probabilities	164
7.1.4	Existence of Measures	166
7.2	Definition of the Integral	169
7.2.1	Integrating Simple Functions	169
7.2.2	Measurable Functions	172
7.2.3	Integrating Measurable Functions	175
7.3	Properties of the Integral	177
7.3.1	Basic Properties	177
7.3.2	Finishing Touches	179
7.3.3	The Space L_1	182
7.4	Commentary	185
8	Density Markov Chains	187
8.1	Outline	187
8.1.1	Stochastic Density Kernels	188
8.1.2	Connection with SRSs	189
8.1.3	The Markov Operator	195

8.2	Stability	196
8.2.1	The Big Picture	197
8.2.2	Dobrushin Revisited	200
8.2.3	Drift Conditions	204
8.2.4	Applications	207
8.3	Commentary	210
9	Measure-Theoretic Probability	211
9.1	Random Variables	211
9.1.1	Basic Definitions	211
9.1.2	Independence	215
9.1.3	Back to Densities	216
9.2	General State Markov Chains	218
9.2.1	Stochastic Kernels	218
9.2.2	The Fundamental Recursion, Again	223
9.2.3	Expectations	225
9.3	Commentary	227
10	Stochastic Dynamic Programming	229
10.1	Theory	229
10.1.1	Statement of the Problem	229
10.1.2	Optimality	232
10.1.3	Proofs	236
10.2	Numerical Methods	238
10.2.1	Value Iteration	239
10.2.2	Policy Iteration	241
10.2.3	Fitted Value Iteration	244
10.3	Commentary	246
11	Stochastic Dynamics	249
11.1	Notions of Convergence	249
11.1.1	Convergence of Sample Paths	249
11.1.2	Strong Convergence of Measures	254
11.1.3	Weak Convergence of Measures	256
11.2	Stability: Analytical Methods	259
11.2.1	Stationary Distributions	259
11.2.2	Testing for Existence	262
11.2.3	The Dobrushin Coefficient, Measure Case	265
11.2.4	Application: Credit-Constrained Growth	268
11.3	Stability: Probabilistic Methods	273

11.3.1	Coupling with Regeneration	274
11.3.2	Coupling and the Dobrushin Coefficient	278
11.3.3	Stability via Monotonicity	281
11.3.4	More on Monotonicity	285
11.3.5	Further Stability Theory	289
11.4	Commentary	295
12	More Stochastic Dynamic Programming	297
12.1	Monotonicity and Concavity	297
12.1.1	Monotonicity	297
12.1.2	Concavity and Differentiability	301
12.1.3	Wealth Dynamics	304
12.2	Unbounded Rewards	308
12.2.1	Weighted Supremum Norms	308
12.2.2	Results and Applications	310
12.2.3	Proofs	313
12.3	Commentary	315
III	Appendixes	317
A	Real Analysis	319
A.1	The Nuts and Bolts	319
A.1.1	Sets and Logic	319
A.1.2	Functions	322
A.1.3	Basic Probability	326
A.2	The Real Numbers	329
A.2.1	Real Sequences	329
A.2.2	Max, Min, Sup, and Inf	333
A.2.3	Functions of a Real Variable	336
B	Chapter Appendixes	341
B.1	Appendix to Chapter 3	341
B.2	Appendix to Chapter 4	344
B.3	Appendix to Chapter 6	346
B.4	Appendix to Chapter 8	347
B.5	Appendix to Chapter 10	349
B.6	Appendix to Chapter 11	351
B.7	Appendix to Chapter 12	352
C	Solutions to Selected Exercises	359

Bibliography
